

WORKING TOWARDS SUSTAINABLE PPE AND CIRCULAR ECONOMY PRINCIPLES

Here at Wonder Grip®, we understand the importance of looking after our planet and caring for our environment both as a business and as individuals. Impacted by the turning off of lights, reducing water usage and recycling efficiently, simple changes that we work towards each day to improve our environment.

ISO9001 - ISO14001 - ISO45001 - BSIF Supplier - OEKO-TEX

WE WORK HARD TO DEVELOP SUSTAINABLE PPE

- As part of our R&D to the marketplace and to facilitate the ever-changing technical needs of our customers, we continually consider extended life products working towards a more sustainable solution.
- We operate circular economy principles resulting in the longer lifetimes, reusing, and recycling during the processing stage of our product range.
- The sustainability and material efficiency aspects are included within PPE Legislation and standardisation and are a key selection factor in public procurement.

HOW DO WE DO IT?

- Design systems (services and experiences).
- Design for longer useful lifetime of product (re-use, durability and washable).
- Eliminate unnecessary or harmful material and substances within the production process via implementation of the OEKO-TEX standard.
- Wonder Grip® coating method allows users to wash their gloves easily, on a regular basis, using alcohol gel-based sanitiser or with soapy water.
- Design for easy end of life.

"At Wonder Grip we strive for continual improvement within our quality standards and overall product sustainability."
